

IOT Alert Online System

Online Iot Alert System

System will connect through home wifi and sensor will work when external switch is on. Sensor will send signal to control box and with flashing led and at the same time will send data to Cloud Server and send Email Alert To Security Company

<----Iot Alert with magnetic sensor on the door when open show led flash and send data to Cloud server with email alert----->

V Use Web Browser according to ip address through mobile phone or computer to monitor status of switch (1)=on (0)=standby
